NanoCool™ DEEPFREEZE™ DRY ICE SHIPPER

DISEAS DIAGNOSTIC DNA TEST COLD CHAIN

WHAT ARE DEEPFREEZE™ SHIPPERS?

DeepFreeze™ Shippers are frozen product shipping systems requiring dry ice. These shippers feature advanced insulation technology to ship -65°C temperature controlled payloads, including cell and gene therapy products for over 96 hours while using less dry ice than traditional packages.

A key design feature of DeepFreeze is a novel spacer to hold a product box in the middle of the shipper. When dry ice is added to the shipper, this keeps the product at the desired temperature until almost all the ice has sublimated.

WHY CHOOSE OUR DEEPFREEZE™ SHIPPERS?

- Advanced insulation properties eliminate re-icing during extended duration shipments.
- Lightweight shippers alleviate safety concerns associated with N2 transport systems and other dry ice shippers.
- Insulation material is manufactured with tough barrier film and nanoporous core to protect your product.
- Environmentally friendly: small footprint produces less waste and less CO₂ output.
- Inner product box accommodates standard 2" tall cryogenic boxes.
- Lower weight and smaller size eases handling
